THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN **THREE MONTHS** FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. **THIS STATUTORY PERIOD CANNOT BE EXTENDED.** SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

DETAILED ACTION

Acknowledgment

1. This Office action is responsive to the amendment filed on 05/27/2009.

Allowable Subject Matter

2. Claims 1-4, 6-13 are allowed over prior art of record.
3. The following is an examiner's statement of reasons for allowance:

The prior art of record, taken alone or in combination, fails to teach or fairly suggest the arrangement of a system and method for a two-dimensional code formation comprising the features of specifying or acquiring a fixed code size, regardless of an amount of storage information to be written therein, creating laser marking information including at least dot coordinate information for forming the two-dimensional code, based on the code size and the storage information, and laser marking the two-dimensional code to uniformly arrange dots vertically and horizontally in an $n \times m$ matrix inside a unit cell based on the dot coordinate information of the laser marking information by irradiating a laser beam directly on a material to be marked, wherein the dots are beam spots generated by irradiating a laser beam and in combination with other features as recited in claims 1, 7 and 10 and further limitation of their dependent claims 2-3, 8-9 and 11-12, respectively.

The prior art of record, taken alone or in combination, fails to teach or fairly suggest the arrangement of a system and method for a two-dimensional code formation comprising the features setting a fixed size of the converted two-dimensional code according to the part regardless of an amount of information to be written in the two-

dimensional code, forming the two-dimensional matrix data having 1 bit per cell, combining the two-dimensional matrix data with the fixed size of the two-dimensional code and converting the combined information into data for laser marking the two-dimensional code including beam spot coordinates, laser marking the two-dimensional code having the set sized directly on the part and laser marking the two-dimensional code to uniformly arrange dots vertically and horizontally in an $n \times m$ matrix array inside a unit cell based on beam spot coordinates converted, wherein the dots are beam spots generated by irradiating a laser beam and in combination with other features as recited in claims 4 and 13 and further limitations of their dependent claim 6, respectively.

Applicant's arguments, see pages 9-19, filed on 05/27/2009, with respect to the rejection of claims 1, 4, 7, 10 and 13 using the combination of Natsukari, Namizuka and Struye references have been fully considered and are persuasive. The 103(a) rejection of claims 1, 4, 7, 10 and 13 has been withdrawn (along with the rejection applied to the dependent claims 2-3, 6, 8-9 and 11-12, respectively).

The cited references Natsukari et al. (US 2004/0046024) teaches system and method for two-dimensional code formation which allows user/operator to input data information or specification of a desirable two-dimensional code such as code type, data volume, printable space, cell size and a symbol size of the code and the system is calculated the inputted data therewith (see figs. 1-23); Namizuka et al. (US 2006/0098227) teaches image processing system that converts digital image signal stored in memory into an output image signal to be supplied to an imaging unit outputting a visible image based on the output image signal so that pixel density of the

output image signal is higher than pixel density of the digital image signal read from the memory and an amount of the output image signal is less than an amount of the digital image signal stored in the memory (see the abstract and figs. 12A-14), Struye et al. (US 2004/0094729) teaches system and method for providing security information or mark in an item wherein the item can be marked in order to trace its manufacturing history (see [0080]); Sato (US 6,164,552) teaches formation method of two-dimensional code by means of laser burning (see the abstract and column 2, lines 12-45) and Roxby et al. (US 6,533,181) teaches an automated method for creating impressions of machine readable encoded symbology using thermojet type solid object printing technology (see column 3, lines 9-67).

Thus, without the benefits of applicant teachings, there is no motivation for one of ordinary skill in the art at the time of the invention to selectively combine the features of the prior art in a manner so as to create the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
